

1. Executive summary

This is a spike body paragraph intended to exercise multi-page layout in @react-pdf/renderer. Each paragraph carries enough text to force the layout engine to break across pages, validating that the fixed footer renders on every page and the letterhead does not duplicate. Long-service-leave liability calculations frequently produce 4–6 page reports for organisations with 200+ employees, so the multi-page footer-split behaviour (OQ-10) is the load-bearing pagination concern. The methodology footer carries the full regulatory disclosure on page 1 and a short version on pages 2+ to keep the document readable without sacrificing the "calculated, not advice" disclaimer on every page.
